<b>Ethical Hacking</b>	<div><div></div></div>	<b>Cloud Computing</b>	<div><div></div></div>
<b>Python</b>	<div><div></div></div>	<b>Blockchain</b>	<div><div></div></div>

## Projects

06/2019 – 11/2019	<b>Employee Attendance Portal</b> This is a web-based project which takes the raw data from the fingerprint sensor used to record the attendance of the employee and then process the record to determine if the person is late or on time or has taken an early leave. The entire data is provided to admin with appropriate visualization to make it easy to understand and analyze each employee's attendance. Developed using HTML5, CSS3, JS, PHP, and MySQL.
01/2019 – 04/2019	<b>Factory Transport Simulation</b> <a href="#">🔗</a> Created a program that would find the shortest path dynamically on any given image of the map and simulate the running of multiple vehicles at the same time with the help of multi-threading. Developed in Python.
06/2018 – 10/2018	<b>Bank Management System</b> <a href="#">🔗</a> Created an end-to-end application for banks to manage their systems. The system could enable admins to open new accounts. The users could make transactions easily and securely with proper authentication. Developed in Java
01/2018 – 04/2018	<b>Report Card Management System</b> <a href="#">🔗</a> Developed a completely dynamic system that could manage Report Cards of any college. The system was designed to Create, Search, Modify, Delete, and Display all student records. Developed in C
